Recommendation Letter

To Whom It May Concern

I am writing to recommend Israt Jahan Tulin for her exemplary contributions as a Research Assistant in CeTI at Technische Universität Dresden. During her tenure, she demonstrated exceptional skills and dedication in advancing our projects, particularly in the development of interactive systems using HTC Vive, Microsoft HoloLens, Unity, and C#.

Israt played a crucial role in the “Wire Loop Game” project, where she was responsible for modifying and enhancing the project. The user had to navigate a sphere along a sinusoidal wire using an HTC Vive controller, receiving haptic and audio feedback upon collision. Israt's work included refining the system to ensure accurate feedback and integrating a series of questions for the user to answer regarding their experience with latency and vibration feedback. Her attention to detail and ability to troubleshoot complex technical issues were instrumental in the success of this project.

In addition to her project-specific responsibilities, Israt was in charge of the HIL-Lab, where she set up and maintained all computers and equipment. She demonstrated excellent collaboration skills, often working closely with colleagues to ensure the smooth and effective operation of our research activities. Her ability to coordinate and communicate effectively with team members was a significant asset to our lab.

Israt's technical proficiency, combined with her proactive approach and collaborative spirit, make her an outstanding candidate for any research or technical role. I am confident that she will continue to excel in her future endeavors and make substantial contributions to any team she joins.

Sincerely,

Annika Dix
